Horizon 3-in-1 Bathroom Heater – 2 Lamp

Must be installed by a licensed electrician (AS/NZS 3000) – the heat lamps get extremely hot, so let them cool before touching.

IN THE BOX

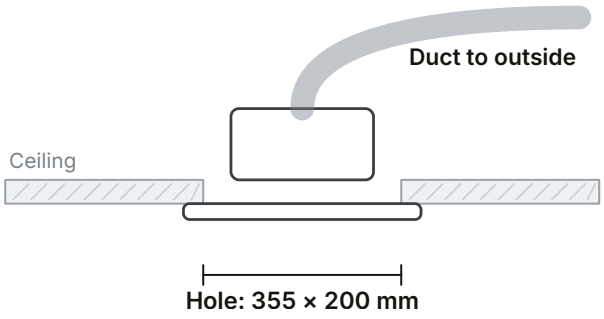

- 1 × Horizon bathroom heater
- 2 × 275 W infrared heat lamps
- 1 × 3-gang wall switch
- 1 × flexible aluminium duct, 1.5 m
- 1 × exterior grille and duct clamps

YOU WILL NEED

- Plaster saw
- Screwdriver
- Tape measure and pencil
- Safety glasses and dust mask

BEFORE YOU START

- Indoor use, flat ceilings only.
- Allow at least 150 mm space above the unit.
- Place it over the spot where people dry off, away from water splashing onto the lamps.
- Fresh air must be able to come into the room (e.g. a gap under the door) for the fan to work well.

STEP BY STEP

1. Turn the power off at the switchboard and test it is dead.
2. Mark a 355 × 200 mm hole between the joists, check for cables, then cut it.
3. Your electrician wires the unit and the 3-gang wall switch as per the wiring diagram in the box. Total load is about 635 W (2 × 275 W lamps, 75 W fan, 9 W light).
4. Clamp the 1.5 m duct to the Ø125 mm side outlet and run it to the exterior grille on an outside wall.
5. Set the colour switch to the colour you want.
6. Lift the unit into the hole and secure it as shown in the instruction sheet.
7. Fit both heat lamps, power on and test each switch.

SETTINGS & USE

- Colour: pick 3000 K, 4200 K or 6000 K with the colour switch.
- Heat, fan and light each have their own wall switch.
- Safety: the fan turns itself on if the inside of the unit goes over 80 °C.

DO NOT

- Don't fit it on a sloping ceiling or a wall.
- Don't leave the heat lamps on for long periods.
- Don't touch the lamps until they have cooled.
- Don't join the duct to a gas water-heater flue or any other appliance duct.

CARE & TROUBLESHOOTING

- Power off, let the lamps cool, then wipe the lamps and fascia with a soft damp cloth.
- Keep the duct and outside grille clear. Replacement lamps: 275 W R125 E27 infrared.

Installation: Greenhse recommends that every product is installed by a licensed electrician to AS/NZS 3000 and local rules. Any work on 240 V wiring must be done by a licensed electrician. Incorrect installation can be unsafe and may void the warranty. **Warranty:** 3 years replacement. Keep your invoice and the electrician's certificate of compliance. Questions? Call (08) 9297 2969 or visit greenhse.com.
